JASON SPOONER

Product Engineer | AI Systems & Technical Implementation

306-570-8341 | jasondspooner@gmail.com | https://jasondspooner.github.io/

PROFESSIONAL SUMMARY

Hands-on technology professional with more than 25 years of experience implementing software, integrating systems, leading technical projects, and supporting production environments. Combines deep infrastructure and security experience with current AI-powered product development. Experienced in translating ambiguous user requirements into practical solutions, owning implementations end to end, and creating clear documentation and training. Known for resourcefulness, sound technical judgment, and close collaboration with users and stakeholders.

CORE QUALIFICATIONS

- Software Implementation and Systems Integration
- AI Product Prototyping and Video Analytics
- Technical Requirements and Workflow Design
- Production Support, Maintenance, and Troubleshooting
- CRM and Third-Party Application Integration
- Network Security and System Audits
- Data Backup, Recovery, and Integrity
- Customer Training and Technical Documentation
- Project Management and Team Leadership

SELECTED AI PRODUCT PROJECT

Ridge Runner Digital Solutions — AI Traffic Monitoring Platform

Independent Product Development

- Designing and prototyping a camera-based traffic monitoring platform, expanding its capabilities from basic motion detection toward vehicle classification, animal detection, licence plate recognition, and traffic analytics.
- Owning product direction, system design, technical implementation, and commercial planning.
- Developing around a resource-constrained, headless Debian compute node with Reolink RLC-811A cameras, requiring practical performance and deployment considerations.
- Exploring real-time object detection, event-based alerts, and macOS text-to-speech notifications.
- Evaluating product requirements and potential customer value while preparing investor-facing product materials.

PROFESSIONAL EXPERIENCE

Founder / CEO — Minerva Computer Consulting

1999–Present

- Own end-to-end delivery of IT consulting engagements spanning web design, IT security, technical support, and systems implementation.
- Work directly with clients to understand requirements, recommend practical solutions, and resolve technical issues.
- Manage projects, client relationships, priorities, and delivery with a high degree of autonomy.
- Build long-term customer relationships through responsive support and clear communication.

IT Manager — ZS2 Technologies

April 2022–June 2024

- Led and supervised the IT team, coordinating technical work and supporting staff development.
- Implemented CRM solutions and integrated third-party applications to improve business workflows.
- Managed hardware infrastructure and network security while maintaining data integrity and system efficiency.
- Developed workflows, standard operating procedures, and technical documentation to support consistent operations.
- Delivered user training and provided hands-on assistance for new systems and processes.
- Maintained current technical knowledge to evaluate requirements and guide implementation decisions.

Senior Analyst — Saskatchewan Health Authority

2001–April 2022

- Supported business-critical systems across a large, complex organization over more than two decades.
- Administered and supported two on-premises SharePoint farms and a Power BI Report Server.
- Managed daily data backup and retrieval across multiple SharePoint environments, protecting data integrity and availability.
- Monitored network activity for suspicious traffic and maintained security protocols in support of the security department.
- Managed routine maintenance, server backups, and hardware infrastructure.
- Travelled to client sites for installations, deployments, and troubleshooting, resolving issues directly with users.
- Balanced operational reliability, security requirements, and user needs in production environments.

Senior Helpdesk Team Leader — Access Communications

1997–2001

- Provided technical support to internal teams and external residential and commercial customers.
- Trained frontline staff and developed support content to improve service consistency.
- Delivered field support and assisted customers with new technology rollouts.
- Diagnosed technical problems, communicated solutions clearly, and built strong customer relationships.

TECHNICAL SKILLS

Systems: Debian Linux, on-premises SharePoint farms, Power BI Report Server, server and hardware infrastructure

Software: CRM implementation, third-party application integration, workflow development, web design

AI and Monitoring: AI video analytics prototyping, motion detection, vehicle classification, animal detection, licence plate recognition, traffic analytics, Reolink camera integration, text-to-speech alerts

Operations: Network monitoring, security protocols, system audits, backup and recovery, deployment, production troubleshooting

Documentation: SOPs, support content, procedural documentation, user training

EDUCATION & CERTIFICATIONS

Network Systems Diploma, Honours — CDI College, Regina, Saskatchewan | 1997

CompTIA A+ Certification — CDI College, Regina, Saskatchewan | 1996
